

# Geosamba Universal v2.0

Intelligent evolution

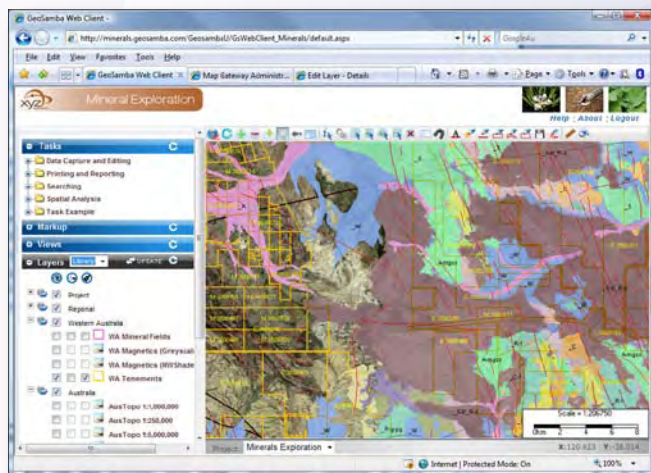

## How do we know we are making the most effective decisions for our business?

Fast and accurate access to information is the most powerful asset a business can own. So in the age of information overload - how do you ensure you remain one step ahead of the game?

## Introducing the solution

GeoSamba® Universal unlocks your business potential by providing a framework for rapidly integrating location data with business processes across an enterprise.

Focused on real-time business integration, reliability, scalability and performance, GeoSamba® Universal empowers you with the intelligence to make decisions that drive a sustainable advantage for your business.

This advanced solution supports:

- a wide range of file formats from all major GIS vendors.
- true integration of corporate databases and enterprise applications through SOAP web services.
- automation of work flows and delivery of focused end user applications.

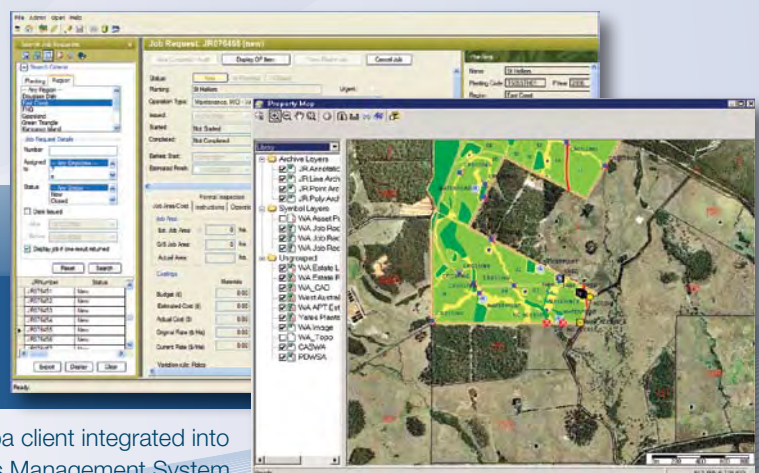

The result - savings in time, money and increased accuracy within complex business environments.

## The power of evolution

Geosamba Universal has just become an even smarter tool for your business. With a host of intelligent improvements, Version 2.0 has a range of new and enhanced features that will make leveraging your full business potential even easier.

## New for Version 2.0

- New User Interface
- WFS-T gateway (S.L.I.P ready)
- Built with .Net 3—faster, more secure, more robust
- Enterprise Deployment Tool

Custom GeoSamba client integrated into the Forestry Works Management System

## Your Competitive Advantage

GeoSamba® Universal goes far beyond other simple web mapping systems. As an advanced framework enabling enterprise-wide geographic business visualization and processing, it enables businesses to rapidly capitalise on new market opportunities, improve decision-making and deliver targeted solutions.

Some of the competitive advantages Geosamba Universal will bring to your business include:

- **Operational Advantage**

Managers can conceive and implement changed business processes to gain competitive advantage or respond to new demands.

- **Increased Span of Control**

Business units, joint ventures, contractors and alliance partners can share data reliably and confidently execute strategy in real time. Multi-enterprise business processes relying on changing spatial data are more efficiently and easily implemented.

- **Timeliness**

Business processes can be quickly defined and implemented without the need to pay or wait for development resources.

- **Freedom**

No more proprietary databases, or restrictions on future database or data warehouse decisions.

- **Reduced Ownership Costs**

A GIS and database agnostic architecture enables existing and future infrastructure to be confidently integrated. Emerging public and commercial web services can be integrated to take advantage of lower data costs. Wizard driven tasks allow rapid creation of customer specific business processes without the high cost of domain expertise or programming resources. An integrated audit engine ensures high availability and fault ready resolution.
